

Tom's Video Playing Sculpture

Written by:

Francisco Burgos

Full-Stack Developer/ Electrical Engineer Control Specialist

Technical Documentation:

Starting Interface:

- Connect to the device's wifi network (Tom's-Wifi) with password: ***tomsculpture***
- After successful connection log into the interface by going to <http://172.24.0.1:3500/>
- From there you can manage the different aspects of the application.

Using Interface:

I tried to make the interface as simple as possible it is divided in blocks which mean:

- **Test Console:** From this block you can test the relay is controlling the light as expected by turning the switch provided, Also the pen is a link to this document which I will also provide to you by email. The envelope link opens your email client to send me an email in case you need support.
- **Available Videos:** This block shows you the available videos stored in the server. From this block you can delete videos and assign the current video to be played by touching the trash and star button respectively.
- **Upload Videos:** From this block you can upload videos to the server.
- **Message:** This block I added just to give you a very little overview of how you can contact me for support.
